The active version contains **100 validated records** characterized by **17 analytical features**. The autonomous engine evaluated data completeness, row uniqueness, attribute validity, and distribution symmetry, culminating in an overall Data Quality Score of **100/100**. The following sections outline the mathematical architecture, detected anomalies, multivariate relationships, and tactical remediation priorities.

Core Empirical Findings:

• The dataset contains 100 verified observations across 17 attributes with an overall Data Quality Score of 100/100.

• Data completeness is 100%, with zero missing cells across all columns.

• Strongest linear association exists between 'Age' and 'Billing_INR' (r = 0.08, little or no linear relationship).

• Categorical concentration observed in 'Gender' where 'Male' accounts for 53.0% of total entries.

Immediate Remediation Priorities:

• **[Operational — Priority: Low]** Monitor the dominant category 'Male' in 'Gender' to identify potential sampling bias or operational dependency. Further domain validation is recommended.

• **[Data_Quality — Priority: Low]** Maintain automated schema validation checks on future dataset ingestion to ensure consistent type mappings.

No dedicated temporal datetime column identified. Row sequence evaluation utilized for chronological inspection.

12. Strategic AI & Statistical Insights

Market/Class Concentration in Gender (Confidence: 95%)

Observation: A single category dominates 'Gender'.

Mechanism & Context: Unbalanced distributions can cause machine learning classifiers to favor the majority class.

Operational Implication: *Stratified sampling or category grouping should be considered for predictive modeling.*

Central Tendency & Spread of Age (Confidence: 95%)

Observation: Distribution shows median = 50.0, mean = 49.13 (std = 18.15).

Mechanism & Context: Discrepancy between median and mean signals distribution asymmetry.

Operational Implication: *Use median as primary measure of central tendency if skewness persists.*

13. Recommended Data Cleaning & Engineering Actions

Pipeline Category	Priority	Prescribed Remediation Action
Operational	**Low**	Monitor the dominant category 'Male' in 'Gender' to identify potential sampling bias or operational dependency. Further domain validation is recommended.
Data_Quality	**Low**	Maintain automated schema validation checks on future dataset ingestion to ensure consistent type mappings.

14. Technical Appendix & Audit Provenance

Mathematical Formulation	• **Tukey's IQR Outlier Rule:** Bounds defined as [Q1 - 1.5*IQR, Q3 + 1.5*IQR]. • **Pearson Correlation:** r = cov(X, Y) / (std(X) * std(Y)). • **Fisher-Pearson Skewness:** g1 = m3 / (m2^(3/2)) evaluating distributional asymmetry.
Data Quality Rubric	Overall score computed as: Completeness (35%) + Uniqueness (25%) + Validity (20%) + Consistency (20%). Penalties scale strictly with null percentage, duplicate records, and constant zero-variance columns.
Storage & Security Verification	Compiled in isolated memory buffer without temporary disk leaks. Raw sensitive rows remain restricted to the local SQLite storage repository. All visualizations rendered via Matplotlib Agg engine.
