Recommendations

Category	Priority	Action Recommendation
Operational	**Low**	Monitor the dominant category 'Two year' in 'contract_type' to identify potential sampling bias or operational dependency. Further domain validation is recommended.
Analytical	**Medium**	Evaluate 'tenure_months' and 'monthly_charges' for potential interaction terms or collinearity redundancy in multivariate regression.
Data Quality	**Low**	Maintain automated schema validation checks on future dataset ingestion to ensure consistent type mappings.

Appendix

Mathematical Methodology	• **Tukey's IQR Outlier Rule:** Outliers identified strictly outside [Q1 - 1.5*IQR, Q3 + 1.5*IQR]. • **Pearson Correlation:** Linear association computed as r = cov(X, Y) / (std(X) * std(Y)). • **Fisher-Pearson Skewness:** g1 = m3 / (m2^(3/2)) measuring distribution symmetry.
Data Quality Scoring	Overall score computed via weighted evaluation: Completeness (35%) + Uniqueness (25%) + Validity (20%) + Consistency (20%). Penalties scale directly with missing cell frequency and duplicate rows.
