12. Strategic AI & Statistical Insights

Significant Association: weekly_sales & customer_footfall (Confidence: 95%)

Observation: Continuous variables 'weekly_sales' and 'customer_footfall' show a strong positive.

Mechanism & Context: Colinear features provide shared variance and inform cross-dimensional drivers.

Operational Implication: *Changes in weekly_sales are strongly associated with changes in customer_footfall. Note: Correlation does not imply causation.*

Central Tendency & Spread of store_id (Confidence: 95%)

Observation: Distribution shows median = 110.5, mean = 110.5 (std = 5.92).

Mechanism & Context: Discrepancy between median and mean signals distribution asymmetry.

Operational Implication: *Use median as primary measure of central tendency if skewness persists.*

13. Recommended Data Cleaning & Engineering Actions

Pipeline Category	Priority	Prescribed Remediation Action
Analytical	**Medium**	Evaluate 'weekly_sales' and 'customer_footfall' for potential interaction terms or collinearity redundancy in multivariate regression.
Data_Quality	**Low**	Maintain automated schema validation checks on future dataset ingestion to ensure consistent type mappings.

14. Technical Appendix & Audit Provenance

Mathematical Formulation	• **Tukey's IQR Outlier Rule:** Bounds defined as [Q1 - 1.5*IQR, Q3 + 1.5*IQR]. • **Pearson Correlation:** r = cov(X, Y) / (std(X) * std(Y)). • **Fisher-Pearson Skewness:** g1 = m3 / (m2^(3/2)) evaluating distributional asymmetry.
Data Quality Rubric	Overall score computed as: Completeness (35%) + Uniqueness (25%) + Validity (20%) + Consistency (20%). Penalties scale strictly with null percentage, duplicate records, and constant zero-variance columns.
Storage & Security Verification	Compiled in isolated memory buffer without temporary disk leaks. Raw sensitive rows remain restricted to the local SQLite storage repository. All visualizations rendered via Matplotlib Agg engine.
